Section 8: Object Oriented Programming

Exercise: What Makes Up A Class

Tweet

We are going to create a class that represents a single tweet. This is an exercise both about code and starting to think about what goes into building a class. There is no right or wrong answer here so don't be afraid to build your class how you see fit. I will go over in the review what I was thinking about when I built mine but again my answer is not the right one.

What properties and methods go into building a tweet class?

Bonus Points

How could you extract mentions and hashtags from the post text?
